

Must have | should have | *nice to have*

<http://web.cs.ucla.edu/classes/spring23/cs35L/project.html>

Support for desktop should be developed and feature-complete before *mobile support*.

App can display dynamic data to the user

- **View a feed of posts sorted chronologically**
 - **Posts include photograph, creator username, title, upload date**
- View a creator's profile
 - Includes their username, profile picture, and posts

App can upload data from the client to the backend

- **Create an account with email, username and password** or Sign in with Google
 - Require emails to end in ucla.edu - it's OnlyBruins after all
- **Login with email and password** or Sign in with Google
- **Create a post with photograph** and title
- **Choose a file** on mobile/desktop, or take a photograph on mobile with [HTML media capture](#)

User can meaningfully search through server-side data

- **Create search bar** for users to find/view other users/creators accounts
 - Could also search for certain topics or posts that fall into a certain category (ex. entertainment, education, etc.)

Additional distinct features (need 3)

1. Tip Bruinbux to your favorite creators
 - a. Will OnlyBruins take a cut?
2. Receive Bruinbux for daily login, login streaks, referral bonus
3. Ability to interact with other users and their content
 - a. Liking posts, commenting, something of that sort
