

## ✨OnlyBruins✨

CRUD app

Use Typescript

Database (tom wants to do)

- Questions: use ORM? Separate cloud DB or run the whole app (server + DB) in an image?
- Considerations: easy Typescript bindings, Tom wants to write SQL
- Must be persisted to the server's filesystem

Frontend

- Twitter-esque feed of posts from creators
- Considering either React or vanilla js
- Maybe use MUI (<https://mui.com/>) for components

GitHub structure

- Got organization name <https://github.com/onlybruins>
- Use monorepo for shared API types between frontend and backend
- Careful with secrets (API key, DB login): store them in a file that's gitignored

Buy a domain (onlybruins.com very cheap)

Sign in with Google to allow only ucla.edu emails?

Feature Brainstorming

- Referral bonus
- Daily sign-in bonus
- Spend the 🐻bruinbux / bearbux to tip your favorite creators and unlock exclusive content
- Post your own content to get 🐻bruinbux
  - Might encourage spamming/low-quality content
